

EG-3P/EG-6P/EG-10P

Proportional Actuators

Applications

The EG-3P/6P/10P (proportional) actuators are designed for use on diesel. gas, and gasoline engines, or turbines. They are particularly well suited for use in control systems requiring a proportional mechanical output or a proportional electrical input.

The EG-3P/6P/10P actuators convert an electrical signal to a proportional rotary

output shaft position to control the flow of fuel or energy

The actuator provides the "muscle" for a Woodward 2301A, 723, 723PLUS, or similar integrating electric control system. The actuator will provide a mechanical output position in proportion to a dc control signal increasing from a nominal minimum to a maximum value.

Standard Features

Critical moving parts are made from either case hardened, through hardened, or surface-nitrited steels. All o-rings and shaft seals are made of a fluoro-elastomer base. All moving parts are submerged in oil. The actuators may be mounted either vertically or horizontally.

Special Features

The actuators can be used for installations where prime movers operate in tandem to drive a common load. With two actuators connected in series, only one electric control is required to supply a common signal to each prime mover's actuator. These actuators are also recommended for applications involving unattended starts.

Oil Pump Model

The actuator with an oil pump requires a drive from the prime mover or other means. such as an electric motor, to rotate the pilot-valve bushing and to power the pump gears to develop the required oil pressure. The actuator does not have its own oil

Electric Motor Drive

An electric-motor drive which includes a self-contained sump is available for use with the EG-6P/10P. The motors are available in ac and dc configurations in most common voltages.

- Proportional electric mechanical transducer
- Rotary output
- 4.5, 6, or 10 ft-lb (6.1, 8.1, or 13.6 J) work capacity
- Oil motor or oil pump option
- EG-3P and EG-10P models are available with certification for North American Hazardous Locations
- EG-3P and EG-10P models are available that are compliant with the applicable CE Directives -ATEX, Pressure Equipment, and Machinery
- EG-10P models are available with certification from TIIS for use in explosive atmospheres in Japan and certification from KGS for use in explosive atmospheres in Korea

Oil Motor Model

An oil motor actuator requires a supply of 80 to 500 psi (552 to 3448 kPa) pressure oil from an external source to rotate the pilot valve bushing and to provide the required work. Work output and stalled torque of the oil motor model are in direct proportion to the supply pressure.

Compensation

Many EG actuators operate with oil supplied directly from the prime mover. Certain multiviscosity motor oils require a compensation system within the actuator to provide needed stability. A needle valve is included in the compensation system to allow response adjustment.

Radiation Resistance

Radiation-resistant parts are available for special applications.

Position Feedback

A position feedback transducer (RVDT) is available to monitor output shaft position.

Note: Unless otherwise specified, these actuators are tested and shipped for vertical operation. When used in a horizontal application, these actuators will have an 8 degree shift in terminal shaft calibration.

Regulatory Compliance

European Compliance for CE Marking:

These listings are limited only to those EG-3P or EG-10P units bearing the CE Marking.

ATEX Directive: Declared to 94/9/EC Council Directive of 23 March 1994 on the approximation of the

laws of the member states concerning equipment and protective systems intended for

use in potentially explosive atmospheres. Zone 2, Category 3, Group IIG Ex nA IIC T3 Gc

Other European Compliance:

Compliance with the following European Directives or standards does not qualify this product for application of the CE Marking:

EMC Directive: Not applicable to this product. Electromagnetically passive devices are excluded from the

scope of the 2004/108/EC Directive

Machinery Directive: Compliant as partly completed machinery with 2006/42/EC

Pressure Equipment

Directive: Compliant as "SEP" per Article 3.3 to 97/23/EC

Other International Compliance for EG-10P:

TIIS (EG-10P): Certified for use in explosive atmospheres in Japan per TIIS Certificate Numbers

TC18079 and TC18151 as Ex e II T3.

Korea (EG-10P): Certified for use in explosive atmospheres in Korea per KGS Certificate Number

06-2-046-Q1 as Ex e II T3

IECEx (EG-3P): Certified for use in hazardous locations IECEx TUR 13.0013X Ex nA IIC T3 Gc **IECEx (EG-10P):** Certified for use in hazardous locations IECEx LCIE 12.0001X Ex e IIC T4 Gb IP54

North American Compliance:

These listings are limited only to those units bearing the CSA or UL agency identification.

EG-3P: CSA Certified for Class I, Division 2, Groups A, B, C, D, T4 for use in Canada and the

United States and UL Listed for Class I, Division 2, Groups B, C, D, T4 for use in the

United States

EG-10P: CSA Certified for Class I, Division 1, Group D, and Division 2, Groups B, C, D, T3 for use

in Canada and UL Listed for Class I, Division 1, Groups B, C, D and Division 2, Groups

B, C, D, T3 for use in the United States

EG-10P with RVDT: CSA Certified for Class I, Division 1, Group D and Division 2, Groups B, D, T3 for use in

Canada and UL Listed for Class I, Division 1, Groups B, C, D and Division 2, Groups B,

D, T3 for use in the United States

EG-10PS: CSA Certified for Class I, Divisions 1 and 2, Group D, T3 for use in Canada and UL

Listed for Class I, Divisions 1 and 2, Group D for use in the United States
